

Vendor Credit Limit — Verification Report

2026-09-15 · parcelmoover-beta · commit 4c8c82a · 76 tests green · live portal screenshots + API

Verdict: Yes — it works, it is enforced on every order path, and it directly affects vendors. Block rule: blocked when balance $\leq$ -credit_limit (per-vendor, positive NPR). Balance = COD collected - delivery charges - settled payouts + verified payments. Refusal is 403 VENDOR_BILLING_BLOCKED with the exact top-up. Recovery is verified-payments-only; admin raises unblock immediately.

1 · Data model

vendors.credit_limit (schema.prisma:1044): positive NPR, default 50000, CHECK > 0, snapshotted at creation. billing_settings.default_credit_limit: template for future vendors only. billing_warn_threshold (nullable): per-vendor warn override w/ global fallback. billing_alert_state (ok|warned|blocked): last-notified state for once-per-transition alerts. Migration 20260914090000 carried old explicit overrides, defaulted the rest to 50000, dropped legacy block columns.

2 · How it functions

Creation snapshots the default (auth.service.ts:987,1118; kyc.service.ts:311,367). getVendorBillingStatus returns balance parts + warnThreshold + blockThreshold ($=$ -creditLimit) + creditLimit + state + amountToClearBlock + pendingPaymentAmount. Enforcement lives in assertVendorCanCreateOrder inside _createOrderImpl (order.service.ts:1015): dashboard, bulk import, and Partner API POST /api/v1/orders all covered; block follows the vendor; only super_admin + explicit overrideBillingBlock bypasses. PATCH /api/billing/vendors/:id/credit-limit (super_admin) validates >0 / $\leq 100M$, audits, invalidates Redis, re-evaluates at once. Verified payments lift blocks immediately (vendor-payment.service.ts:258); deliveries/settlements re-evaluate fire-and-forget. Owner + enabled vendor_staff notified with link to /finance/billing.

3 · Reliability

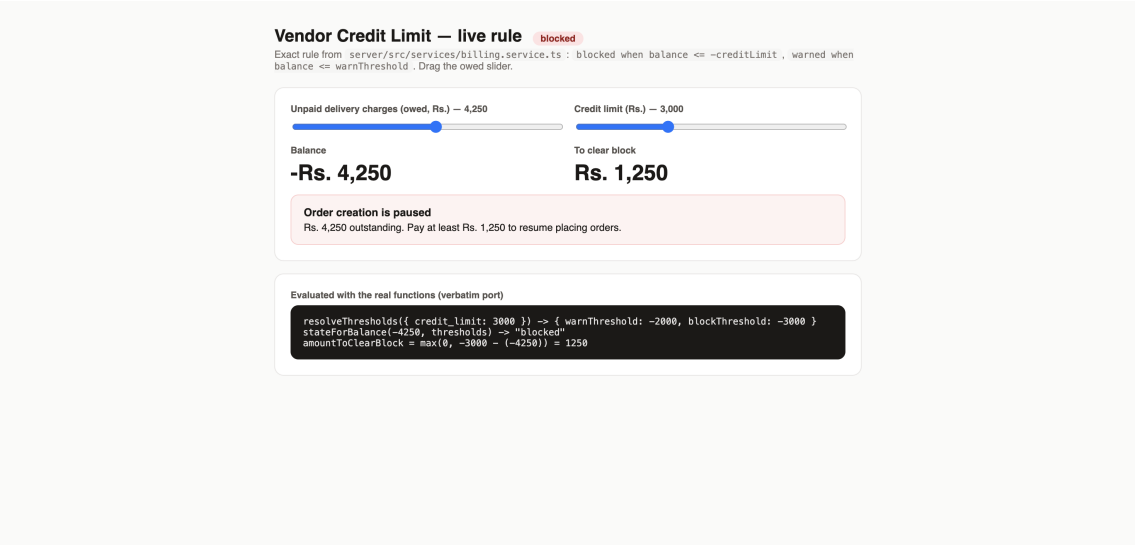

Area	Result
Unit tests	30/30 billing + 46/46 KYC/transit/public-billing — green 2026-09-15.
Single source of truth	Earned-charge rule generated from one constant (money-rules.ts).
Money safety	Paise rounding; block before warn; pending claims excluded.
Failure isolation	Billing eval best-effort; never fails a delivery.
Tolerances	30s balance cache: 1-2 edge orders may slip; concurrent near-limit orders can both pass; converges next order.
Gap to decide	Per-vendor override can block before warn (limit 800 vs warn -2000). Deliberate but inconsistent with default guard.

4 · Vendor impact — direct

Blocked: no orders on any channel until verified payment / limit raise, with owed total + minimum top-up shown. Warned: orders allowed + banner + notification. Claim flow: QR pay → file claim (pending, visible, not credited) → verified (credited, may unblock) / rejected with remark. Suggested amount = amountToClearBlock when blocked, full owed when warned.

5 · Rule in action (verbatim stateForBalance logic, warn -2000, limit 3000)

Owed Rs. 1,500 → ok; Rs. 2,500 → warned; Rs. 4,270 → blocked, pay at least Rs. 1,270 (matches unit fixture).

6 · Portal proof — live (2026-09-15, read-only, real logins)

Superadmin → Billing & Credit Control → Vendor balances: every vendor carries its own CREDIT LIMIT with per-row Edit. biguu nigga sits at **Rs. 100,000** vs the Rs. 50,000 default everywhere else — the per-vendor override live on real data.

Billing & Credit Control
Verify vendor payments, review outstanding balances, and set the credit thresholds.

Payment verification 0 | Vendor balances | **Thresholds & QR**

Credit thresholds

Warn is a negative account balance; the default credit limit is a positive cap. A vendor is warned past the warn line and blocked once what they owe passes their own credit limit. Branch thresholds pause transit into a branch with COD remittance overdue.

  "payouts": 7415,
  "paymentsReceived": 60699,
  "balance": 63787.5,
  "warnThreshold": -2000,
  "blockThreshold": -100000,
  "creditLimit": 100000,
  "state": "ok",
  "amountToClearBlock": 0,
  "pendingPaymentAmount": 0
}
```

Key files: billing.service.ts · money-rules.ts · order.service.ts:1015,1846 · vendor-payment.service.ts:258 · billing.routes.ts:165 · billing.controller.ts:287 · schema.prisma:1044 · migration 20260914090000 · BillingManagement.tsx · VendorBilling.tsx · BillingStatusBanner.tsx · CREDIT_LIMITS.md

Bro summary: the limit is live and it bites — own limit per vendor (default 50k), owe past it and every order door shuts with the exact pay-up number; verified payment reopens instantly. Clean single-rule design, green tests, no bypass except explicit super_admin override. Chota gaps: ~30s cache at the edge, personal limit can skip warn straight to block.
